

Supplying Sustainable Aggregates from April 2012.....

OUR INNOVATION

Our innovative washing process creates a variety of the finest quality, sustainable aggregates, comprising of:-

- 3-5mm Aggregate Shingle/Pipe Bedding
- 6mm Aggregates Shingle/Pipe Bedding
- 10mm Aggregates Shingle/Pipe Bedding
- 20mm Aggregates Shingle/Pipe Bedding
- 40mm Aggregates Shingle/Pipe Bedding
- General Building Sand
- Granular Sub- base Type 1
- Fine Grade Soil
- General Soil
- Vibro Piling Material
- Bespoke Product
(incl. sustainable drainage)

All products are produced and tested in compliance with the WRAP quality protocol and conform to British and European standards.

They are available ex works or delivered direct.

INERT WASTE RESOURCE

Our fully licensed inert resource facility is conveniently located at Stanton Harcourt, Oxfordshire, offering excellent access to the A40 and A415. It accepts inert surplus material, providing a competitive alternative to landfill.

MUCKAWAY SERVICE

Our own fleet of lorries and skips offer an extensive muckaway service within a 40 mile radius of Oxford; providing a fully comprehensive package. This gives assurance to customers that their waste is being handled responsibly.

ENVIRONMENTAL CONTRIBUTION

More than 260 million tonnes of virgin aggregate are quarried every year for use in the UK Construction Industry. At present, only 60 million tonnes of recycled aggregate is used. Our service embraces sustainability offering a crucial alternative to virgin aggregates and landfill, with our plant recovering up to 100% of feedstock.

BACKHAULING

We actively encourage the disposal of inert waste and the collection of sustainable aggregates in one vehicular round trip. This maximises cost savings and minimises our carbon footprint.

OUR MISSION

It is our aspiration to become the preferred supplier of sustainable aggregate products and support Oxfordshire in achieving zero waste to Landfill.
